Website lbdlandscaping.com (New and updated, take a look!)

Recommendations from our fertilizer and spray department:

- **Deep Root Fertilization** is an excellent way to jump start trees and shrubs before the upcoming growing season. Some trees and shrubs may have winter damage and this is a great solution to help with the natural repair of your plants.
- **Dormant Oil Spray Application** helps the suffocation process of over-wintering insects and promotes good tree health. Please call to discuss or schedule these beneficial services.
- **Crane Fly** larvae will start feeding on your lawn. It is very important to stop this cycle! If you are not scheduled for this treatment, are concerned or see excessive insects in your lawn, please give us a call.

Recommendations from our tree pruning department:

- **All trees, especially Fruit and Deciduous**, pruning time is here! It is the perfect time to prune and prep before the foliage develops. We would be happy to come by, take a look and give you an estimate.

Back Flow Device Testing:

- Have you received your notice from the water bureau regarding the annual testing of your sprinkler system Back Flow Device? Remember, we can take care of that for you and we do the paperwork! Give us a call and we will add you to the list.

Come check us out at the **Yard, Garden and Patio Show, February 12, 13 and 14th** at the Oregon Convention Center! Stop by to take a look at our display. Spring is just around the corner, so come get inspired to make those needed changes or upgrades that you have been dreaming about. It will be nice to see you and visit!
